

# LEGO Mindstorms robots with a ZCS controller in a simulated physical world

2<sup>nd</sup> KIM presentation

Ernst Blaauw

Faculteit der Exacte Wetenschappen  
Supervisor: dr. M.C. Schut

Wednesday, the 13<sup>th</sup> of January, 2010

# Table of contents

- 1 Introduction
- 2 Zeroth level Classifier System
- 3 Model
- 4 Implementation
  - Software

Questions

# ZCS overview

## General characteristics of a ZCS

ZCS is an evolutionary machine learning system.

- Published by Wilson (1994)
- Rule based
- Binary input / output
- Generalize

Rule format:

{input}	:	{action}	:	{strength}
1#0	:	001	:	20
00#	:	111	:	15

- Rules fired if *input* matches
- Higher *strength* → higher prob. on *action*
- GA creates new rules
- ZCS generalizes using #'s

Questions

---

## ZCS algorithm: main loop (performance cycle)

---

- 1: initialize population
  - 2: repeat until (termination condition is satisfied)
  - 3:       select matching rule set  $\mathcal{M}$  from population
  - 4:       select action set  $\mathcal{A}$  from  $\mathcal{M}$
  - 5:       select action from  $\mathcal{A}$
  - 6:       run GA with probability  $\chi$
  - 7:       evaluate  $\mathcal{A}$  using feedback from environment
  - 8: end repeat
-

---

## ZCS algorithm: Genetic Algorithm (GA) (discovery cycle)

---

- 1: select two parents using fitness proportionate selection
  - 2: recombine parents to create two kids
  - 3: mutate kids with probability  $\mu$  per allele
  - 4: delete two classifiers from population selected using inverse fitness proportionate selection
-

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution:    rain and/or cold    → jacket  
                         hot and dry                    → no jacket

Questions

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket

hot and dry → no jacket

*Weather: cold and dry (00)*

### Rules:

00:0:20

00:1:15

01:0:20

11:1:30

11:0:25

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket

hot and dry → no jacket

*Weather: cold and dry (00)*

### Rules:

**00:0:20**

**00:1:15**

01:0:20

11:1:30

11:0:25

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket  
hot and dry → no jacket

*Weather: cold and dry (00)*

Selected rule:

**00:0:20**

Action: No jacket

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket

hot and dry → no jacket

*Weather: cold and dry (00)*

Bad action, rule penalized:

**00:0:10**

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket

hot and dry → no jacket

*Weather: hot and rain (11)*

### Rules:

00:0:10

00:1:15

01:0:20

11:1:30

11:0:25

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket

hot and dry → no jacket

*Weather: hot and rain (11)*

### Rules:

00:0:10

00:1:15

01:0:20

**11:1:30**

**11:0:25**

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket  
hot and dry → no jacket

*Weather: hot and rain (11)*

Selected rule:

**11:1:30**

Action: Wear jacket

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket

hot and dry → no jacket

*Weather: hot and rain (11)*

Good action, rule rewarded:

**11:1:40**

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket

hot and dry → no jacket

GA invoked, new rule:

**10:0:20**

Worst rule thrown away:

**00:0:10**

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket

hot and dry → no jacket

*Weather: hot and dry (10)*

### Rules:

10:0:20

00:1:15

01:0:20

11:1:40

11:0:25

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket

hot and dry → no jacket

*Weather: hot and dry (10)*

### Rules:

**10:0:20**

00:1:15

01:0:20

11:1:40

11:0:25

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket

hot and dry → no jacket

*Weather: hot and dry (10)*

Selected rule:

**10:0:20**

Action: No jacket

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket

hot and dry → no jacket

*Weather: cold and dry (00)*

Good action, rule rewarded:

**10:0:30**

## Example

Simplified example of ZCS rules

### Input:

00: cold and dry

01: cold and rain

10: hot and dry

11: hot and rain

### Actions:

0: don't wear jacket

1: wear jacket

Best solution: rain and/or cold → jacket  
hot and dry → no jacket

### Rules:

10:0:30

00:1:15

01:0:20

11:1:40

11:0:25

Questions

The **hand-made controller** benchmarks ZCS controller.

Rules:

- Touch sensor: go back or left or right
- More pen track than earlier: go left or go right
- Less pen track than earlier: keep heading in direction
- Not on track: move forwards

# Hypothesis

$H_a$  (*main*)

The performance of the ZCS controller is at least as good as the performance of the hand-made controller
